1.

What does the analogy “AI is the new electricity” refer to?

AI runs on computers and is thus powered by electricity, but it is letting computers do things not possible before.

Through the “smart grid”, AI is delivering a new wave of electricity.

AI is powering personal devices in our homes and offices, similar to electricity.

Similar to electricity starting about 100 years ago, AI is transforming multiple industries.

Correct

Yes. AI is transforming many fields from the car industry to agriculture to supply-chain...

points

2.

Which of these are reasons for Deep Learning recently taking off? (Check the three options that apply.)

Neural Networks are a brand new field.

Un-selected is correct

10/10 points (100%)

Quiz, 10 questions

Deep learning has resulted in significant improvements in important applications such as online advertising, speech recognition, and image recognition.

**Correct**

These were all examples discussed in lecture 3.

We have access to a lot more computational power.

**Correct**

Yes! The development of hardware, perhaps especially GPU computing, has significantly improved deep learning algorithms' performance.

We have access to a lot more data.

**Correct**

Yes! The digitalization of our society has played a huge role in this.

Introduction to deep learning

Quiz, 10 questions

Recall this diagram of iterating over different ML ideas. Which of the statements below are true? (Check all that apply.)

10/10 points (100%)

- ☐ Being able to try out ideas quickly allows deep learning engineers to iterate more quickly.

Correct

Yes, as discussed in Lecture 4.

- ☐ Faster computation can help speed up how long a team takes to iterate to a good idea.

Correct

Yes, as discussed in Lecture 4.

- ☐ It is faster to train on a big dataset than a small dataset.

Un-selected is correct

- ☐ Recent progress in deep learning algorithms has allowed us to train good models faster (even without changing the CPU/GPU hardware).

Correct

Introduction to deep learning

Quiz, 10 questions

Yes. For example, we discussed how switching from sigmoid to ReLU activation functions allows faster training.

4.

When an experienced deep learning engineer works on a new problem, they can usually use insight from previous problems to train a good model on the first try, without needing to iterate multiple times through different models. True/False?

True

False

Correct

Yes. Finding the characteristics of a model is key to have good performance. Although experience can help, it requires multiple iterations to build a good model.

○ Figure 2:

○ Figure 3:

Introduction to deep learning

Quiz, 10 questions

10/10 points (100%)

Correct

Correct! This is the ReLU activation function, the most used in neural networks.

6. Introduction to deep learning

Images for cat recognition is an example of “structured” data, because it is represented as a structured array in a computer. True/False?

10/10 points (100%)

☐ True

☒ False

Correct

Yes. Images for cat recognition is an example of “unstructured” data.

points

7.

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of “unstructured” data because it contains data coming from different sources. True/False?

☐ True

☒ False

Correct

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of “structured” data by opposition to image, audio or text datasets.

8.

Why is an RNN (Recurrent Neural Network) used for machine translation, say translating English to French? (Check all that apply.)

It can be trained as a supervised learning problem.

Introduction to deep learning

Quiz, 10 questions

Correct

Yes. We can train it on many pairs of sentences x (English) and y (French).

10/10 points (100%)

It is strictly more powerful than a Convolutional Neural Network (CNN).

**Un-selected is correct**

It is applicable when the input/output is a sequence (e.g., a sequence of words).

**Correct**

Yes. An RNN can map from a sequence of english words to a sequence of french words.

RNNs represent the recurrent process of Idea->Code->Experiment->Idea->....

9.

Introduction to deep learning

In this diagram which we hand-drew in lecture, what do the horizontal axis (x-axis) and vertical axis (y-axis) represent?

Quiz, 10 questions

10/10 points (100%)

- x-axis is the amount of data
- y-axis (vertical axis) is the performance of the algorithm.

Correct

- x-axis is the performance of the algorithm
- y-axis (vertical axis) is the amount of data.

- x-axis is the amount of data
- y-axis is the size of the model you train.

- x-axis is the input to the algorithm
- y-axis is outputs.
